Hi Alex,

I hope your transition from FSIS to ARS went well.

How is Kelly doing? Time is growing nigh... We are thinking about you two.

Quick question, are you interested in sitting in our discussion with FDA and PDP concerning glyphosate monitoring? FDA has said recently that they will pull some grain samples from 10 key states that have registered the pesticide that has both 2,4-D and Glyphosate (I think it is Enlist Duo.) I believe they will also be analyzing for 2,4D too in these samples. Again, I am not sure but I think that the grain is corn. I thought there might be some interest by some of this. I can ask FDA and PDP to include you if you are interested. It will likely be a teleconference.
